

final touch to perfection

lignadecor
edgebanding

We develop, match and manufacture top quality edgebanding for the furniture industry.

We develop

When it comes to edgebanding, we offer unlimited design possibilities and countless new ideas for furniture makers.

We are highly familiar with the requirements of the furniture markets around the world, which ensures that our product range is always up to date.

We match

We carefully match our edgebands to obtain the perfect match with your board design.

Our color matching specialists will suit the color and design of your sample to enable you to deliver a superb edge finish. We can produce any gloss level required, from super- matt to mirror finish.

And to ensure a perfect match with board surfaces, we offer various embossing finishes.

In the rare occurrence that we do not have the correct printing or embossing cylinder for your needs, we encourage you to work with us in developing your own custom design.

We are swift, so that our customers can be swift in turn. Most color matches are performed within seven days.

We manufacture

PVC Edgebands

Our most popular edgebanding solution. Indispensable in terms of price/performance ratio. Our PVC edgebandings provide excellent light fastness and color reproduction. Can be recycled. Manufactured in 700 mm width from 0.4 to 3 mm thickness and in single strips of various widths upwards of 2 mm thickness.

ABS Edgebands

This engineering plastic is our second thermoplastic alternative. Impact resistant and tough, it has numerous economic and processing advantages. Being environmentally friendly, it can be recycled or incinerated. Manufactured in 700 mm width from 0.4 to 2.0 mm thickness and in single strips of various widths upwards of 2 mm thickness.

PP Edgebands

Polypropylene is the most recent addition to our edgebanding range. Its soft characteristic makes it ideal for tight radii. PP has also gained momentum in carcass edging as it represents another beneficial product for environmental requirements. Can be recycled or incinerated. Manufactured in 700 mm width from 0.4 to 1.5 mm thickness.

3D Edgebands

Innovative, exclusive appearance. Printed on the backside of a clear 3D plastic with a special primer for optimum adhesion, our Optix range gives a unique impression of depth and a typical 3D effect. With wood finishes to special metallic, multiplex and fantasy decors. Manufactured in single strips of 1.5 and 2.0 mm thickness.

Metal Edgebands

Our trend collection. Stylish. Being premium, our metal edgebands are used in the office, kitchen and living areas. With metallic surfaces; stainless steel, aluminium and copper, we create exclusive concept.

Balancing Foils

Lignadecor Balancing Foil is the ideal solution for backing. LD Balancing Foil is the foil applied with primer! It is available in 11 different trend colors, similar to the most popular decors. Easy to apply with excellent finish in the board. Our LD Balancing Foils provide perfect stability without irregularities. Being moisture-tolerant, it requires little adhesives. Manufactured in 1220 mm width from 0.40 mm - 2 mm thickness. Available in sheets or jumbo rolls.
